

B enzymatic trap cleaner

A CLEANER WORLD IS WITHIN REACH

The Bio-Active Trap cleaner is step two in the drain cleaning process. It is a unique blend of powerful surfactants, enzymes and bacillus organisms that combine to tackle organic build up in urinals that can lead to slow flow or ultimately plugging. Modeled after long proven wastewater treatment and drain plug removal technology, this product is designed to reduce solids in near anaerobic environments like no-water urinal trap ways and drains. The enzymes and non-pathogenic micro-organisms used in this product are designed to attack hair and other organic debris that can build up in trap ways, drains and sewer pipelines. Read and understand MSDS before using.

NOTE: Part A and B can be used in a recommended system approach or individually for specific plumbing challenges.

Plug Busting:

Part B is the second step of the drain cleaning process that is designed to return slow flowing or plugged urinals back to normal flow. This is often compared to a low cost alternative to mechanical snaking - The "liquid snake". Designed specifically for use in both no-water and low flow flush urinals, it could also be used in regular flush urinals.

Enzymatic trap cleaner benefits!

- Bacillus micro-organisms are naturally occurring and considered to be non-pathogenic
- This product is considered to be non-hazardous and non-corrosive to skin; making it safer for workers, urinals, and piping
- Unlike chemical drain cleaners, micro-organisms work until the food source/build up is removed
- Micro-organisms can have beneficial effects by removing solids in down line sewer piping

Helpful Hints:

- More effective to treat the urinal when it's draining slowly to avoid a complete plug.

NOTE: Heavy trap build up may require more than one consecutive treatment cycle.

- For most effective result, do not use the urinal for 24 to 48 hours. However, Urinals can be treated and returned to use in 20 minutes if needed.
- Regular monthly use of Purleve's™ plumbing maintenance system on both no-water and low flow flush urinals can significantly reduce frequency of plugging, urinal downtime and odor.
