Pürleve PürTank Enzymatic Toilet Sanitizer

By placing the PürTank Enzymatic Toilet Sanitizer on the bottom of the toilet water tank, the toilet will be maintained clean and fresh for up to 2 months. The PürTank Enzymatic removes toilet stains, eliminates malodors and can help eliminate organic compounds accumulated in drain pipes. It has eliminated the use of harmful chemicals with a careful selection of natural bacteria spores. PürTank is 100% biodegradable, easy to install, doesn't require batteries and is low maintenance. The PürTank Sanitizer leaves a visually blue, clean and hygienic effect in the toilet bowl, which leaves a strong impression for the patrons using the facilities.

Pürleve PürBlock Urinal Screen

The Pürleve PürBlock Urinal Screen not only traps unwanted debris from entering the drain lines, it also deodorizes, cleans and prevents scale build up. Every flush over the PürBlock Screen tints the water blue while leveraging the good bacteria to help eliminate odors and maintain drain lines.

Pürleve BioTab

The Pürleve BioTab is designed for water-savings, odor control and trouble-free maintenance of all low-flush, conventional flushing urinals / troughs and no water urinal systems. The BioTab helps clean the drains by leveraging its biologically active formulations that break down organic matter, including the matter found in urine. In addition, it reduces maintenance costs by providing free flowing drains in no water urinals.
