

Color of Clean... Do your part to add more 'GREEN' to your washroom

"Green" - The word means much more than it did even just a few years ago. Outside of the classroom, **"Green"** is not just a favorite color anymore; it's a way of thinking, acting and living. From major manufacturers exploiting new energy alternatives, to neighborhood recycling programs, **"Green"** is coloring the world a better place.

At Pürleve™, we support the global green initiative. All of our products have been designed to take advantage of 'next-generation' green technology. Each of our Hygienic Door Handle systems incorporate lead free electronics and low-power systems resulting in reduced battery consumption to efficiently drive the technology within. The refills use no paper and the antimicrobial sleeve material that each handle advances is 100% recyclable.

In addition, the Hygienic Door Handle ends the need to waste paper towels to avoid touching the dirty door handle. Not only are the paper towels expensive, they also tend to create an unsightly mess on the washroom floor. Last, this excessive use of paper towels is a strain on our environment:

- Paper towels often account for an estimated 20 to 40 percent of waste (by volume) created in an office building.
- Paper towels are typically not recycled and therefore, over 35% of landfills is Paper!
- 17 Trees are consumed and 20,000 gallons of water are polluted to make one ton of paper towels.
- Within a year, a typical fast food restaurant with 2 washrooms might use 2000 lbs of paper towels or the equivalent of 17 trees!
- Within a year, a typical school might use 5 tons of paper towels or the equivalent of 89 trees!

As we move forward in our progressive development cycle at Pürleve, we do so with our green commitment always top of mind. At Pürleve we're doing our part for the environment—making it an easy choice to be clean and green.

Other Benefits of the Pürleve Hygienic Door Handle System:

- Reduces Germ Cross - Contamination
- Advances a sleeve with Microban® antimicrobial protection over the handle after every use – Microban protection inhibits the growth of odor causing bacteria, keeping the sleeves cleaner for continuous protection.
- Provides superior facility image
- Low maintenance, low cost
- Thousands of uses per refill

Purleve™ installs easily, replacing any standard Push-Pull and Latch handle, and offers your patrons the simple-to-use, cost-effective and **"Green"** sanitary solution they have been reaching for.
